CAREER OBJECTIVE

Information Technology graduate focused Java and Spring Boot, aiming to build scalable, secure, and high-performance systems. Eager to learn quickly, collaborative effectively, and contribute high-quality solutions in a professional software engineering environment.

EDUCATION

Saigon Technology University - STU

2022 - 2026

Major: Information Technology

GPA: 3.2/4.0

TECHNICAL SKILLS

- **Programming Languages:** Java, JavaScript, TypeScript
- **Frontend:** ReactJS, NextJS
- **Backend:** Spring Boot, Spring Security, Spring Data JPA, Hibernate
- **Database:** MySQL, SQL Server, Redis
- **Tools:** Git, Postman, Docker

PROJECTS

Fish Sales Management Application | Spring boot, ReactJS, MySQL

- End-to-End System: Built a fish wholesale platform unifying online ordering, POS, inventory, and customer/supplier debt management.
- Core Business Logic: Implemented FIFO lot-based costing, automated margin reporting, and weight shrinkage tracking across purchase batches.
- Data Consistency & Security: Designed relational schemas and REST APIs with AOP audit logging to synchronize stock, credit limits, and order states.
- Auth & Integrations: Integrated Spring Security (JWT in HttpOnly cookies, Redis token revocation), VNPay payments, and real-time SSE notifications.
- Delivery & Collaboration: Leveraged AI tools (Claude, Cursor) for design analysis and test generation, collaborating in a 2-person team via Git CLI.
- [Github](#)

English Learning Platform | Next.js, React, TypeScript, MySQL

- Gamified Learning Core: Developed a self-learning web app featuring linear lesson trees, hearts, XP, daily streaks, and 4 interactive exercise types.
- Server-Side Security & Integrity: Enforced server-side grading and active session validation with stripped payloads to prevent client-side answer tampering.
- Concurrency & Idempotency: Implemented idempotency keys and row-level database locking within atomic transactions to eliminate duplicate XP and streak awards.
- Authoring CMS & Safe Uploads: Built a role-based back office ensuring strict question gradability, with secure file uploads verified via content-based MIME checks and content hashing.
