CAREER OBJECTIVE

Information Technology graduate focused Java and Spring Boot, aiming to build scalable, secure, and high-performance systems. Eager to learn quickly, collaborative effectively, and contribute high-quality solutions in a professional software engineering environment.

EDUCATION

Saigon Technology University - STU

2022 - 2026

Major: Information Technology

GPA: 3.2/4.0

TECHNICAL SKILLS

- **Programming Languages:** Java, JavaScript
- **Frontend:** ReactJS
- **Backend:** Spring Boot, Spring Security, Spring Data JPA, Hibernate
- **Database:** MySQL, SQL Server, Redis
- **DevOps & Cloud:** AWS EC2, Docker
- **Tools:** Git, Postman

PROJECTS

Fish Sales Management Application | Spring boot, ReactJS, MySQL

- Built an end-to-end fish wholesale platform unifying an online storefront, in-store POS, and back-office inventory, pricing, and customer/supplier debt ledgers.
- Implemented FIFO lot-based cost of goods sold, allocating each sale across purchase lots at intake price to produce per-product margin reports and expected-vs-actual weight shrinkage.
- Designed the relational model and REST layer to keep stock, credit limits, and order state consistent across online and POS channels, enforcing all money- and permission-critical rules server-side with AOP audit logging.
- Integrated Spring Security with JWT in HttpOnly cookies and Redis-backed token revocation, VNPay online payments, and real-time notifications over Server-Sent Events, each built independently from official English documentation.
- Applied an AI-first workflow with Claude and Cursor to compare design options and generate test scenarios, reviewing every generated line before merging, and shipped features from real operator needs such as recurring standing orders and supplier due-date reminders.
- Collaborated effectively within a team of 2, utilizing Git and command-line interfaces (CLI) for version control and streamlined project delivery.
